CMSC 117: Introduction to Computing: Interactive Systems
Final Project
Proposal 4/7; Design 4/16; Presentation 5/10; Project 5/17

Your final project should be an ambitious project using the skills you've learned in this course. The project could be some type of interactive piece of art or a game. You will be graded on four components:

- **Project Proposal (Apr 7)** What are you proposing to do? Why is it interesting?

- **Project Design (Apr 16)** How are you approaching the problem? Describe using prose, storyboard, or diagrams how your project will work.

- **Project Presentation (May 10)** A ten minute, in-class presentation of your project. Including both a demonstration of the project as well as a description of how it works.

- **Project (May 17)** Post your final project on `openprocessing.org`.

Deliverables

Submit an electronic copy of your proposal, design, presentation, and final sketch via moodle. Also, you should post your sketch on `openprocessing.org`.
