

CMSC 143: Introduction to Object-Oriented Programming with Robots

Lab 1: Personal Robots

Due February 8, 2012

This lab introduces you to your robot, Calico (the Python programming environment), and the wiki¹.

Learning Objectives

- Become familiar with the IPRE robot kit.
- Learn how to issue robot commands.
- Learn how to start Calico and save programs.
- Learn how navigate the myro wiki.

Lab Report

Submit an electronic copy (PDF) on moodle of your lab report named `cmsc143_lab1_LASTNAME.pdf`

Getting to Know Your Robot

1. What COM port did you use to connect to your robot (keep in mind this will change often)?
2. What is the name of your robot?
3. What is your robot's battery voltage?

Self Portrait

Use the robot's camera to take your picture and save it to a file using the following code snippet:

```
p = takePicture()
show(p)
savePicture(p, 'me.jpg')
```

Driving Your Robot

There a variety of ways of getting your robot to move. The functions we will use most often are `forward()`, `backward()`, `turnLeft()`, and `turnRight()`. All these functions take a power value from -1 to 1, as well as an optional time parameter. If you don't use a time parameter the robot will go forward, backward, or turn, indefinitely (until a `stop()` or some other movement command is applied).

A more direct way to control the robot is by controlling each motor independently using the `motors()` function. `motors()` takes two power values in the range $[-1, 1]$ for both the left and right wheels. Experiment with the `motors()` function. What values are needed to mimic the behavior of `forward()`, `backward()`, `turnLeft()`, and `turnRight()`? How can you use motors to make the robot follow an arc?

Scribbling

Use your robot to draw a square, a 5-point star, or another shape using (a) the gamepad and (b) a function you write, saved in a module. Along with including your program, write a paragraph reflecting on the differences between these two approaches.
